How do I run the Student Immunization Report to include all immunizations entered for the student(s)?

When running the iHealth > Reports - Health > Student Immunization Report you need to set the Start Date to match the year the immunizations were given.

For example, if you want to check for immunizations given to students in Grade Level = 07, find the earliest birth year for that grade level (ie 2005) and use a Start Date = 01/01/2005. This will make sure all immunizations given since birth are included in the report.

The report will give you student detail, a total count of the number of students included in the report, and a total count for each immunization.
