

How do I sftp out of ipass?

A public private key needs to be generated. See

<http://e-articles.info/e/a/title/How-to-Generate-a-Key-Pair-Using-OpenSSH/>

http://ask-leo.com/how_can_i_automate_an_sftp_transfer_between_two_servers.html

```
ssh-keygen -t rsa
```

name the file something_id_rsa i.e.

```
/home/ipass/.ssh/glhrs_blackboard_id_rsa
```

Do not create a passphrase.

Update the report program with

```
type = sftp
```

```
server = -o IdentityFile=/home/ipass/.ssh/id_rsa username@domain
```

So for Connected -oIdentityFile=/home/ipass/.ssh/northbridge_blackboard_id_rsa "connected
userid"@sftp.blackboardconnect.com

FOR LDAP use

```
-o IdentityFile=/home/ipass/.ssh/id_rsa cn=username,ou=orgunito=@domain
```
